

Design joins forces with quality

Intelligent fabrics made in Germany

drapilux

drapilux fabric is IMO-certified for the shipbuilding industry. Through our extensive range of colours, custom-made services and local communication in our global network, we're able to work out budget-friendly textile concepts for your needs. Our intelligent functions such as fire and sound protection, fresh-air guarantee and antimicrobial effect all work together to ensure exceptional room quality.

My name is Stella Xu. As Sales Manager for the maritime sector in the Asian market and fabrics expert, I'm available to deal with any questions or suggestions you may have.

Intelligent fabrics

Fabric should do more than just lend the room an attractive ambience, which is why drapilux fabrics make an active contribution to improving safety as well as the air and room climate. With these innovative functions, you can rest assured that you've made the right choice for safety and cost savings.

DRAPILUX FLAMMSTOP

drapilux flammstop fabrics fulfill the most stringent safety standards for all living and working environments. The brand's award-winning safety has been documented through general certification for all national and international standards.

- Special treatment processes ensure inherent flame retardancy
- The fabric's flame retardancy remains fully intact over the life of the product – even after washing

DRAPILUX AIR

drapilux air fabrics use a catalyst to neutralise odours and pollutants. Unlike conventional fabrics, which absorb odours and pollutants, drapilux air fabrics convert them into natural non-toxic materials.

- Unlike other “deodorising fabrics”, the catalytic effect of drapilux air is not dependent on UV light, and is therefore equally effective in the pitch dark
- The ambient air is therefore odour and pollutant-free all day long

DRAPILUX BIOAKTIV

drapilux bioaktiv is inherently antibacterial and therefore ensures higher quality and efficiency wherever room hygiene plays a key role. Silver ions deep in the weave effectively and reliably eliminate bacteria on the surface of the fabric.

- Its inherent antibacterial property remains intact even after washing
- The fabric needs to be washed less frequently, thus saving money and disinfectant

DRAPILUX AKUSTIK

Thanks to their specific, effective sound-absorbing property, drapilux akustik fabrics considerably reduce noise. Regardless of the level of sound protection provided by the fabric in question, drapilux akustik can offer the ideal solution for any commercial property.

- Noise is not only irritating, but can also make people ill: using drapilux akustik fabric promotes well-being and increases performance

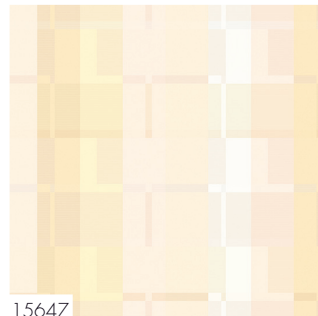

DRAPILUX ALL IN ONE

Our latest innovation to hit the scene is drapilux all in one – both air and bioaktiv in a single product. drapilux all in one combines the benefits of pollutant-neutralising and sound-absorbing fabrics, which have already proven their worth in commercial properties, with those of the antibacterial fabrics.

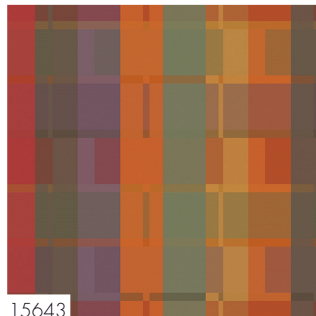

- The ambient air is odour and pollutant-free all day long
- Inherent protection against pathogen formation and transmission
