topcoats

Practicality and aesthetics. At Api we have always believed that ships and yachts are alive and that floors must take shapes around them, covering them and making them more attractive, like a tailor made garment designed by architects and applied directly on board, transforming ideas into reality

flexigel decoro

The best-known and most widely used resin floor, with applications on over 100 ships, more than 20 years' experience and references, and a peerless aesthetic appearance. This liquid product, which can be produced in almost any colour, is applied on-site like all Api floors and polymerises in just a few hours. Its characteristics of elasticity, flexibility and strength remain practically unchanged over time. The colours stay the same despite use at any latitude, even in areas where UV rays are at their most aggressive.

Very limited maintenance needs, low weight, exceptional water resistance and anticorrosion characteristics, and the possibility of designing and reproducing drawings, shapes and logos mean that **Flexigel decoro** floors are an essential component in ship decoration and, because of their technical characteristics, make an irreplaceable contribution to the design of ships and yachts. Available in different colours and in *Syntheteak* version.

flexigel decoro soft

The Soft version has been created to obtain a stronger, more flexible floor suitable for all external surfaces, but also for indoor and outdoor sports areas on ships and for children's play areas, particularly when combined with high-thickness, high-elasticity underlayers. Another field of application is in acoustically sensitive areas, where **Flexigel decoro soft** offers significant impact sound damping.

Provided with IMO-MED certification and produced in an incredible range of colours and decorative granules, it permits numerous colour combinations and its versatility can be exploited to create geometric or freehand illustrations, offering enormous creative freedom. In addition, because of the application technique used, Api floors can be sanded when necessary without affecting the design. This ensures that decorative decks are durable and have almost unique technical characteristics. Available in different colours and in *Syntheteak* version.

flexigel lh

The reflective power of this latest generation resin floor coating significantly reduces deck heating and offers an ideal comfort level for all areas where contact with the deck is most frequent (walking barefoot, sitting on a bench around the swimming pool or Jacuzzi, or reclining on an Api resin chaise longue).

Solarium, Lido and Spa: all areas where resin is used to coat not only the deck, but also the furnishings that can be produced using this innovative material. Available in different colours and in *Syntheteak* version.

flexisecurit er

epoxy flooring

This is the best-known resin floor for technical and work areas and has been installed on hundreds of cruise, working and military vessels.

Produced with the desired anti-slip level and various finishings depending on the required effect, **Flexisecurit er** forms part of the new “Api galley floor” concept and can also be used in all catering areas, in onboard workshops and crew stairways, in garbage treatment and food storage areas, in lockers, pantries and behind bar counters, in storerooms, in laundries and in all areas where vinyl or carpet have too short a lifespan, where tiles are too heavy and offer an unsatisfactory level of hygiene, and where water resistance, strength and maintenance are the key factors at play. **Flexisecurit er**, certified for indoor use, can be used today in all indoor areas.

	Scope	IMO/MED	Specific weight	Indoor	Outdoor
Flexigel decoro	Long-lasting, flexible, resilient resin top coat	•	1,30 kg/l	•	•
Flexigel decoro soft	Highly elastic and flexible top coat	•	1,30 kg/l	•	•
Flexigel lh	Highly reflective topcoat, combining aesthetics with controlled surface temperature for outside		1,30 kg/l		•
Syntheteak	Environmentally friendly, decorative, wood-like deck, which applies for Flexigel lh, Flexigel decoro, Flexigel decoro soft. It is improved by no-slip features and an outstanding appearance	•	see reference products	•	•
Flexisecurit er	Waterproof, resilient, long-lasting topcoat ideal for heavy duty and work areas	•	1,80 kg/l	•
